

ONDC Helpline

ONDC wishes to have a voice helpline for different types of users who may want to reach ONDC for support requests, grievances, or any other queries. The different personas who would be reaching out on this helpline are:

- Sellers who want to / or are already selling on ONDC network
- Network Participants who can be on the buyer side OR seller side (terms used are Buyer NP, or Seller NP)
- Technology Service Providers
- Customers who want to buy OR have bought through one of the Buyer APPs on the network

Types of requests: People who have not joined these are like LEADs for businesses who want to join on the network OR People who have some kind of grievance, issues with ONDC or its network participants, OR there might be some queries which users might have with ONDC or any participant. We have given the different types of issue data that is linked subsequently in the document.

ONDC wants an automated solution to keep this cost-effective from the manpower deployment and with the ability to scale depending on call requirements.

Specific Challenges here are:

- Different personas coming with different kinds of problem, determining context from the perspective of raising a grievance is important
- We ensure sufficient detail is captured based on the issue type so that a productive callback can be arranged by ONDC

Default action is going to be raising a TICKET for a call back request [ONDC will provide an API for raising this ticket in its ticketing system, expectation is that API will be called, which will provide ticket ID], with whatever details are captured during the call. Following this, a SMS/WhatsApp message will be sent to the caller with captured details and a service ticket.

Example flow:

Language selection	To begin with, these may be two key languages in English and Hindi, we can subsequently add more languages in due course.
Bot	Hello, welcome to the ONDC helpline here to help you. Please let me know how I can help you?
User input	"User describes the issue - say My order has not been delivered"
Bot identifies issue type	BOT Identifies issue type and based on issue type it understands this is mostly an "Customer" who has bought from one of the ONDC apps
Bot asks follow up questions	Which application did you use to place the order? <User input> Can you confirm the order ID <User input> Additional questions only if these details are required for specific types of issues

	We are sorry to hear this, I have logged your complaint and we ensure this is looked into on priority. You will receive a resolution on the same within 24 hours on your number <>
Bot creates a ticket	Based on types of issue, default action could be that “You will receive a callback within 24 hours, etc.”
